

# attalus fiber system

maximize manufacturing potential

# maximize manufacturing potential

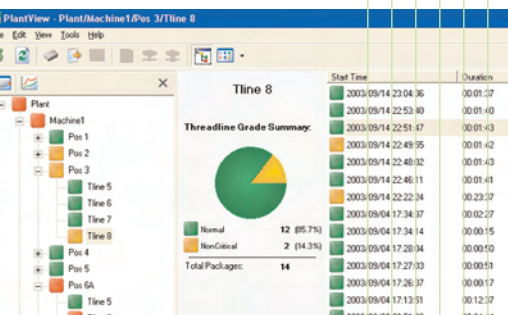

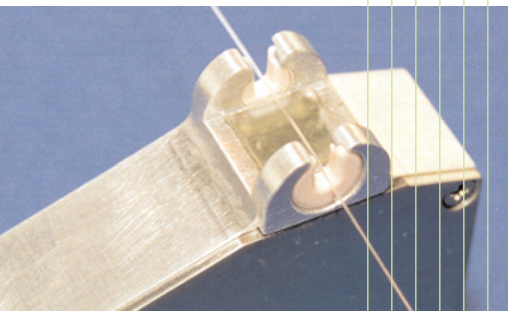

Using an innovative electromagnetic sensor technology, the **Attalus Fiber System** supplies real-time, on-line product and process information used to maximize the manufacturer's competitive advantage through improved quality, yield, efficiency and customer satisfaction.

Imagine how your business would improve if you could **continuously monitor** in real time:

- the quality of the product as it is being produced
- the performance of the spinning machine
- the performance of the operators

Imagine how you could better service existing and new customers if you could provide quality **trace-ability** on every package from the time it is made to the time it is consumed.

Imagine the **Attalus Fiber System**.

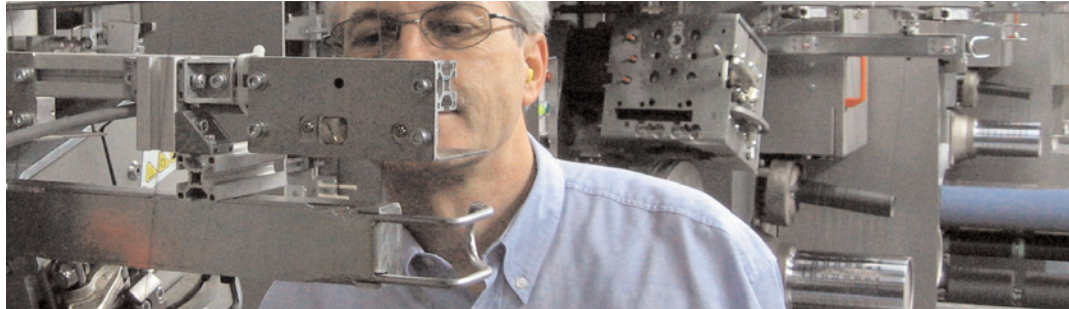

### **Increase Top Grade Yield**

Manufacturers can alarm and fix conditions that lead to faulty yarn in real time thereby increasing top grade yield.

### **Enhance Operator Performance**

The Attalus Fiber System provides the capability for managers to track, measure, and benchmark shift efficiencies to help manage downtime.

### **Maximize Machine Uptime**

Information on non-uniform machine conditions allows manufacturers to move from preventative, to real time maintenance thereby increasing machine uptime.

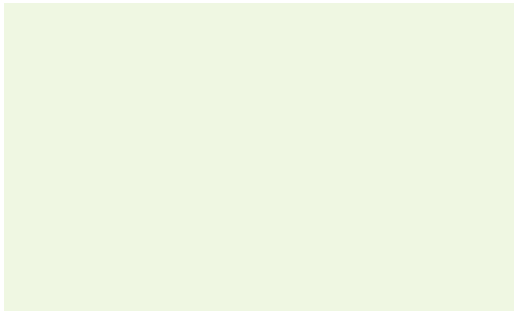

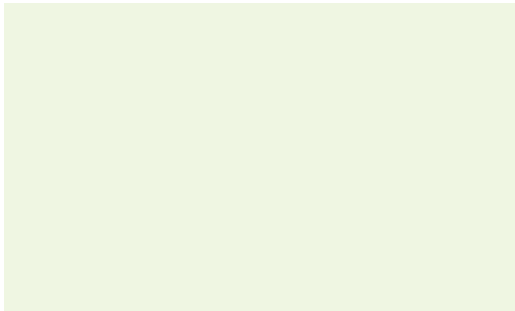

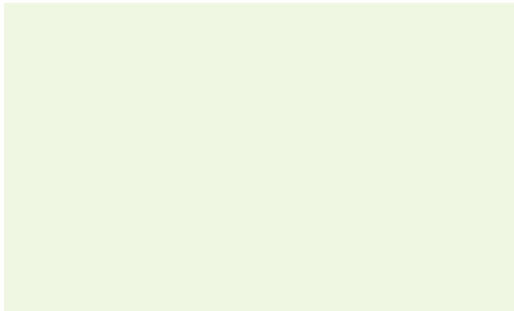

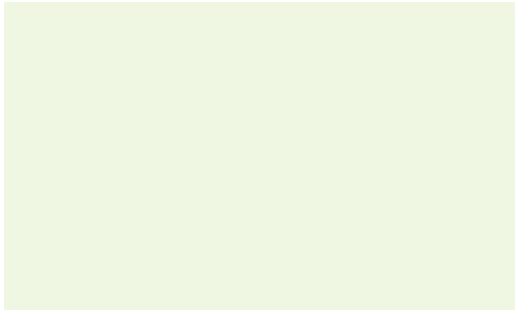

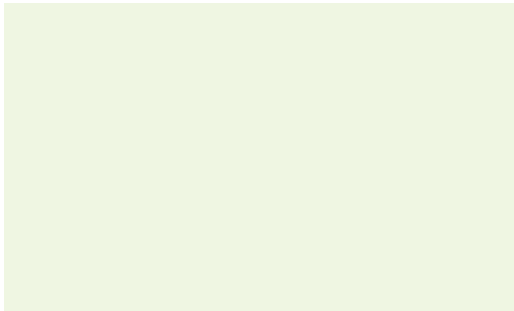

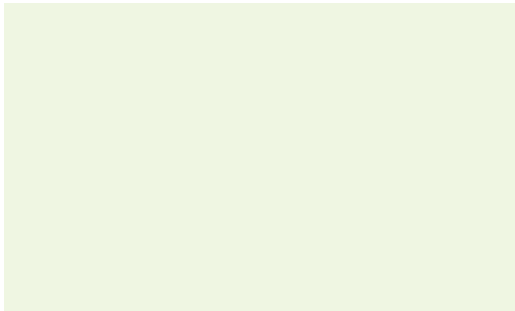

### **Strengthen Customer Relationships**

Quality information is available for all packages produced thereby providing manufacturers with the competitive edge in maintaining and developing new relationships with downstream customers.

**top line growth  
bottom line rewards**
